

## Screenshot from creating and working on workspace dev

```
mandark@ubuntu:~/shared/shared/lab3$ terraform workspace new dev
Created and switched to workspace "dev"!

You're now on a new, empty workspace. Workspaces isolate their state,
so if you run "terraform plan" Terraform will not see any existing state
for this configuration.
mandark@ubuntu:~/shared/shared/lab3$ terraform apply
Acquiring state lock. This may take a few moments...
data.aws_ami.lab: Reading...
data.aws_ami.lab: Read complete after 2s [id=ami-03a4363a7d864a093]
```

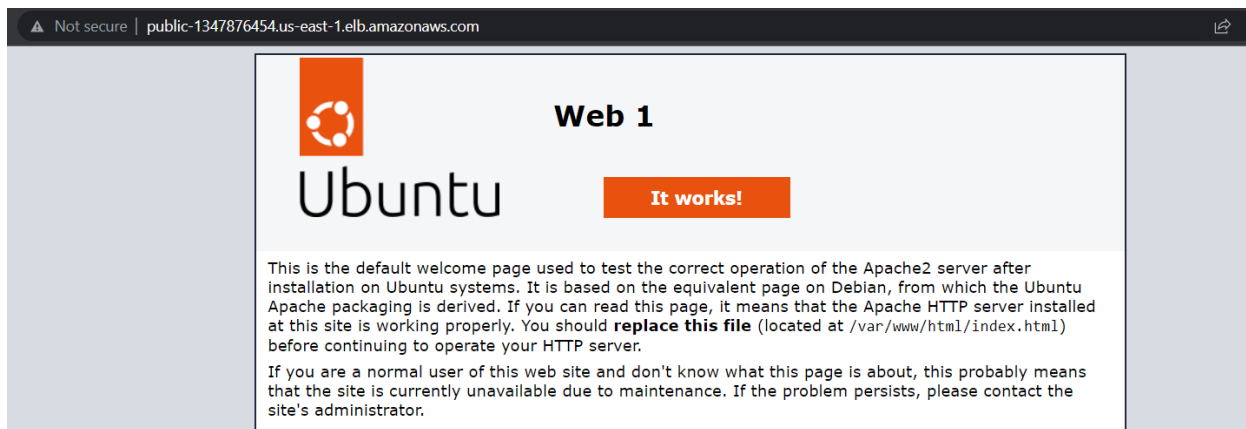

## Screenshot from the configuration of the proxy

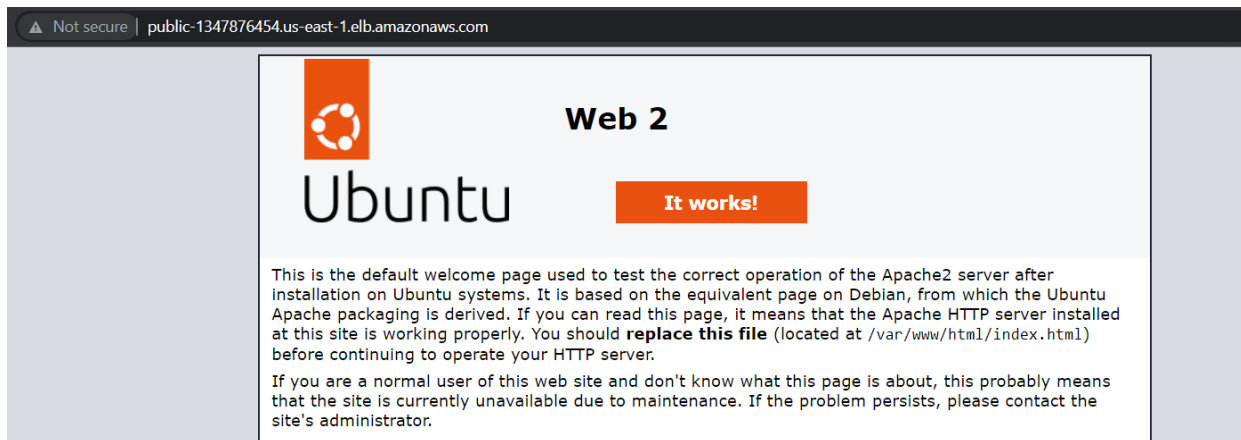

```
http {

    ##
    # Basic Settings
    ##
    server {
        location / {
            proxy_pass http://internal-private-1578818207.us-east-1.elb.amazonaws.com;
        }
    }
    #sendfile on;
    #tcp_nopush on;
    #types_hash_max_size 2048;
    # server_tokens off;

    # server_names_hash_bucket_size 64;
    # server_name_in_redirect off;
}
"/etc/nginx/nginx.conf" 87L, 1580B
```

## Screenshot from the public dns of the load balancer when you send a traffic to it from a browser and it returns the content of the private ec2s

## Screenshot from the s3 that contain the state file
